Springtime WITHIN

A Greenhouse knows no seasons...

A tradition of excellence spanning the generations.

~ Santa Barbara Greenhouses

World Leader in home Greenhouse Technology

Home gardener greenhouses are available in a variety of shapes and sizes. Some are more efficient than others. Our years of experience have proven to us that vertical walls are the most useful and practical. Our vertical wall design provides up to 30% more growing space above the benches than slope sided or dome shapes. Almost every commercial Greenhouse has vertical side walls.

Now the home gardener can enjoy his favorite hobby all year long. A Greenhouse maintains that growth promoting atmosphere through all four seasons. Cozily protected from winter's frost, the fragrance and beauty of out of season flowering plants and bulbs may be enjoyed even more because of contrasts of climate indoors and out. Various fruits and vegetables may be harvested from your Greenhouse bringing welcome variety and luxury to the table.

With rising food costs and increased contamination by chemical sprays, your dollar savings will pay for your Greenhouse many times over, while you guard your health with nutritious homegrown vegetables. Your Greenhouse means freedom from harsh weather extremes - year-round production from your garden.

WHAT IS THE BEST COVERING MATERIAL?

There are glass poly carbonate and fiberglass Greenhouse coverings. We use only the finest Greenhouse quality polycarbonate or 3/16" tempered safety glass. Our polycarbonate assures many years of service and weather resistance with approximately 90% light transmission. While it captures light from the growth area of the spectrum, it screens out useless or harmful rays such as ultraviolet ... resulting in more growing power. (These coverings are hail, shatter resistant and self cleaning.) Our deluxe models have full size tempered plate glass walls. We do not use single or double strength glass scraps or pieces...when you walk into a Santa Barbara Greenhouse you will find uniform diffusion of light down and around plants from every direction producing uninterrupted healthy plant growth.

IS A REDWOOD FRAME BETTER?

Redwood is resistant to weather, insects, decay and should last a lifetime with no special treatment. There is no finer or beautiful wood available for a Greenhouse. Our frames are made entirely of selected kiln dried Redwood and are bolted together for strength and stability. Compare the construction of a Santa Barbara Greenhouse with any other. Our Redwood will not require painting, rust, corrode or crack and is unaffected by changes in temperature. Our frame is engineered for strength using rust resistant galvanized hardware.

IS IT DIFFICULT TO ASSEMBLE?

There is no Greenhouse available that is easier to assemble. The Deluxe model comes to you with sections or modules completely finished by skilled craftsmen at our factory. These finished panels are easily bolted together for quick assembly.

UNCONDITIONAL GUARANTEE

When you receive your Greenhouse examine it. Each item must be exactly as described. You must be satisfied or your entire purchase price will be refunded promptly upon return of the merchandise, less shipping and handling.

Answered
QUESTIONS

Vertical sides are designed to give maximum growing space and at the top where you need it, instead of slanted or curved walls. Plus our side walls are 6 feet tall giving space where you need it most. Compare our all bolt construction to any other, nothing comes close.

Superior DESIGN

America's outstanding Greenhouse value

Many people tell us this is the finest affordable double wall Greenhouse for home gardeners. Our insulated model is fast becoming the first choice of gardeners nationwide. The walls have an airspace acting as insulation. This means greater ease of climate control and big savings in heating and cooling costs of up to 40%. Our many owners from the southern states to northern Alaska report great results in growing and energy savings with our double wall insulated Greenhouse.

Our engineer has added extra framing to the double wall model for greater strength. This complete kit comes with all parts factory cut to size and instructions for easy assembly.

Santa Barbara DELUXE

One of America's finest greenhouses for the special gardener.

One of America's finest greenhouses for the special gardener. Redwood is the perfect material for a Greenhouse and is unsurpassed as a garden structure...most compatible with a fine residential environment.

Santa Barbara Greenhouses are used in schools and universities throughout the United States where quality and durability are required...clear Redwood is precision milled and assembled into panels by skilled craftsmen. These panels are glazed with tempered plate glass 3/16" thick set in butyl... heavy fiberglass or double wall insulated polycarbonate. The result is a completely finished panel that should last for generations.. the deluxe model is shipped in pre-built panels that are easily bolted together at the same time of erection... the result is a quickly installed Greenhouse of outstanding quality (also available as a kit).

The deluxe model Redwood Greenhouse blends with most homes and eliminates the cold hard look of a metal Greenhouse. The finished wall sections are, pre-drilled and glazed with tempered plate glass to make assembly easier and faster than metal kits that are subject to error, corrosion and costly maintenance.

Check these important Features:

- Installation is easier and faster with the modular system.. simply bolt together • Factory finished panels,
- Roof and side vents standard • All lumber clear California Redwood • Pre-hung door • Or as Kit
- Wall glazing 3/16" tempered plate glass set in butyl • Glass to ground... all one piece

Santa Barbara DELUXE LEAN-TO

The deluxe lean-to model...

The deluxe lean-to model... includes all the quality features and construction details of our free standing model. Everything is finished to fit perfectly with all drilling done in our factory. The same select kiln dried Redwood and plate glass panels are used.

Santa Barbara STANDARD

One of America's finest greenhouses for the special gardener.

Our Standard model comes with all parts pre-cut, all drilling and measuring done at our factory and all hardware sorted for your convenience. Clear and fully illustrated directions guide you step by step. A few common household tools are all that you will need, no special skill is required. The dutch doors are standard equipment, pre-assembled and ready for hanging. All metal parts are galvanized for years of weather resistance. When completed your Greenhouse will be firm and strong...held together by steel bolts, plates and brackets. Our standard models have 4 sets of sliding vents to assure your plants a steady supply of fresh air.

STANDARD LEAN-TO MODELS

A lean-to can fit into a narrow space against your house or garage. If located against your house it will reduce heating costs. If placed over a door or window the heat from your home can be utilized to maintain growing temperatures throughout winter. Another advantage is the easy access from your home into your Greenhouse. Locate your Greenhouse where it will receive the most sunlight possible November through January.

Santa Barbara lean-to greenhouses include all the quality features and construction details of our free standing models. Everything is cut

to fit perfectly and all drilling is done in our factory. The same select kiln dried Redwood and Greenhouse fiberglass panels are used including the dutch door.

Redwood BENCHES

Standard lean-to models & all Redwood benches

ALL REDWOOD BENCHES

These benches are the finest available. California Redwood is the most durable and attractive material for benches. We use the same premium quality Redwood in our benches as throughout the frame. These benches are sturdy, long lasting and clean easily. Most of our customers order benches with their greenhouses and double their growing space. Steel bolts and plates secure the bench to the frame for strength and easy assembly. With our design of fiberglass to the ground you get more light beneath the benches for extra growing power.

Santa Barbara MONTECITO

*"The All **Aluminum** Model, a Greenhouse like no other."*

Compare our heavy-duty Exclusive Insalume frame with any other. Our 8mm Double Wall Polycarbonate panels slip into channels creating three dead air spaces for a highly insulated frame. Our frames are entirely bolted together with 16 gauge steel plates creating the strongest Greenhouse available. No bar caps! No gaskets! With a sidewall height of a full 6 feet.

The Montecito model is extremely easy to assemble as the panels simply slip into the frame and then bolt the steel plates in place. So quick and easy anyone can do it.

Imagine stepping into your Montecito Greenhouse in winter and feeling like you've just stepped into a pleasant Hawaiian day. Smell the Plumeria, pick fresh tomatoes or tend blooming orchids that you can bring into your home. A piece of paradise right in your own backyard.

- All Bolt Construction
- 8mm Twin Wall Polycarbonate
- Rafter Ties for Extra Strength
- Dutch Door

Strongest Greenhouse **AVAILABLE**

*The **Montecito Model** is extremely easy to assemble!*

Customer INSTALLATION

*What makes us better than all the rest?..
...it's all about detail.*

Santa Barbara CLIMATE CONTROLS

For convenience & better plants

SHUTTER MOUNTED EXHAUST FAN

Prevent excessive heat buildup with this powerful 10" exhaust fan. Automatic shutters open while the fan circulates cool air over your plants. Aluminum blades, zinc plated wire guard, aluminum shutters felt tipped for quiet operation. Easy to install. 115V. One year manufacturer's guarantee.

HEAVY DUTY HEATER

The Thermostat control will protect your plants automatically on cold days. Heat circulator forced air fan, operates quiet, while case stays cool. A real help for your warm weather plants. Neutral grey finish, 115V, one year manufacturer's guarantee, 1500 watts, 5118 BTU's, UL listed, 16 x 10 x 9 1/2".

FAN CONTROL THERMOSTAT

Set the dial at the temperature you want and the exhaust fan will operate automatically. A real convenience for your air circulating system. 115V and 115V Aluminum face plate.

HOME GREENHOUSE FOG-MIST SYSTEM

Releases a growth promoting fog-mist your plants will love for a minute or more every two hours. Fully automatic, which can save your plants when you are away. Plug in & connect to your water line.

AUTOMATIC AIRFLOW SHUTTERS

Aluminum 10" square shutters with felt tipped edges open to provide fresh air for your plants when the fan goes on and close when the fan goes off. Easily installed.

220 VOLT HEAVY-DUTY CONVECTION HEATERS

Light enough to carry, yet provide heat for large areas. These heavy-duty units include protective steel intake and discharge grills. Permanently lubricated motor and cord reduce maintenance and labor associated with operation of the unit. Thermostat provides temperature control, while safety temperature limit prevents overheating.

Stability REVIEW

Hurricane Hugo was here...

10/15/89

Thought you'd like to see
how one of your greenhouses
came thru "Hurricane Hugo".
Withstood 138 mph winds &
the trees fell all around —
but there she stands —
amazing!! Sylvia Roth
Mt. Pleasant S.C.

Seasonal REVIEW

Winterized Santa Barbara Greenhouse

Dear Victor...

12/8

I've enclosed a few things I thought you'd enjoy seeing...

The article just appeared last Friday in the Billings (Montana) Gazette...with us on the cover in "your" greenhouse! The photos are of our "winterized" Santa Barbara Greenhouse....covered with plastic to help insulate....and with the first 4' section with a baffle to act as a buffer as you come and go. We've had 19° BELOW ZERO...and maintained a 65° temperature! So, we are very pleased! Things are going very well...have even tried your pineapple idea...and have three plants doing quite well! No fruit

yet, of course...but we are hopeful!

We are growing almost all our herbs for the feast....ALL our bedding plants (perennial and annual)...and also many beautiful house plants (cyclamen, ivy, poinsetta, ferns (2 varieties) as well as some succulents and am starting some indigenous evergreen trees from seed... (Lodge Pole Pine, Spruce and Douglas Fir) Am wintering about 15 large geraniums that I started from seed last year, that spent the summer in the garden. (couldn't hold all of them over....had over 200!) At any rate...as you can see, we are thoroughly enjoying our greenhouse...

Comments FROM CUSTOMERS

Last weekend, with the help of my wife, I completed my Greenhouse. It is very attractive and we are proud to have it in our yard.

~ Harry P. Miller (New Mexico)

We are very pleased with our Greenhouse. It is better looking than any we have seen and I don't see how you sell it for such a low price.

~ Wesely Beesner (California)

My plants are growing so well I just had to let you know how happy we are with our Santa Barbara Greenhouse. It is everything you said it would be.

~George Celevich (Connecticut)

I am enjoying my Greenhouse so much and my orchids never looked so good. I am a nurse and my friends still don't believe that I put it together by myself. Thanks again.

~Florence Parrish (Oregon)

We have recommended your Santa Barbara Greenhouses to all of our friends and neighbors. Everyone is surprised at the beautiful vegetables we are growing. It is a pleasure to do business with you.

~ Dorothy Morris (Texas)
